CLICHA
Climate Change in Agriculture

Academic Info Day:

Climate Change in Agriculture

What are the real consequences of climate change in our country? How does climate change affect agricultural production and livestock farming? Is there a way for the primary sector to become "more resilient", evolve and continue to produce the required amount of food in an ever-changing environment? And finally, what can be the role of higher education and open-access teaching in tackling the phenomenon of climate change? Let's find together the answers to these questions.

Conference Amphitheatre,
Agricultural University of Athens
Thursday, 23/05/2019
10:00 – 12:40
